

Services for Drupal

Open Source Content Management System

Across all industries, there is a demand for flexible, cost-effective ways to create exceptional web experiences. Drupal, an open source content management system, meets this need by providing an innovative solution for the enterprise. Many industries, including education technology, entertainment, government, healthcare, high technology, media/publishing, and retail, use Drupal for a wide variety of purposes. Drupal supports online endeavors with a modern toolset and modules for extendable features.

Viderity Services for Drupal 2

Advanced Functionality

Drupal has become one of the most comprehensive Content Management Systems available. Viderity can help you incorporate Drupal's advanced functionality such as advanced menu management, polls management, graphics modification tool, user's management and much more. These functions make it possible to create simple or advanced websites, blogs, discussion boards, social networking pages, etc.

Manage a Variety of Content Types

With Drupal we can help your organization create and manage many content types, like: videos, polls, user management, text, blogs, podcasts, statistics, and implement advanced user, graphics and page content management.

Easy Site Management

We can help you take advantage of Drupal's ability to categorize site content through URL addresses, paths, and custom list development which makes for easy management, search and reuse of the content.

Plugins

We can help you take advantage of the thousands of plugins available with Drupal as well as help you create your own plugins. Installation and Modification Viderity can also provide the advanced knowledge to install and modify the rich functionality that scripts offer and the expertise to implement new solutions Efficiency We can provide assistance with scalability and efficiency issues to optimize server loads. Our consultants also have advanced knowledge of PHP and HTML languages as well as CSS required for script development.
